Notice

Use of the technologies described in this specification may infringe patents, copyrights or other intellectual property rights of FIPA Members and non-members. Nothing in this specification should be construed as granting permission to use any of the technologies described. Anyone planning to make use of technology covered by the intellectual property rights of others should first obtain permission from the holder(s) of the rights. FIPA strongly encourages anyone implementing any part of this specification to determine first whether part(s) sought to be implemented are covered by the intellectual property of others, and, if so, to obtain appropriate licenses or other permission from the holder(s) of such intellectual property prior to implementation. This specification is subject to change without notice. Neither FIPA nor any of its Members accept any responsibility whatsoever for damages or liability, direct or consequential, which may result from the use of this specification.

19 **Foreword**

20 The Foundation for Intelligent Physical Agents (FIPA) is an international organization that is dedicated to promoting the
21 industry of intelligent agents by openly developing specifications supporting interoperability among agents and agent-
22 based applications. This occurs through open collaboration among its member organizations, which are companies and
23 universities that are active in the field of agents. FIPA makes the results of its activities available to all interested parties
24 and intends to contribute its results to the appropriate formal standards bodies.

25 The members of FIPA are individually and collectively committed to open competition in the development of agent-
26 based applications, services and equipment. Membership in FIPA is open to any corporation and individual firm,
27 partnership, governmental body or international organization without restriction. In particular, members are not bound to
28 implement or use specific agent-based standards, recommendations and FIPA specifications by virtue of their
29 participation in FIPA.

30 The FIPA specifications are developed through direct involvement of the FIPA membership. The status of a
31 specification can be either Preliminary, Experimental, Standard, Deprecated or Obsolete. More detail about the process
32 of specification may be found in the FIPA Procedures for Technical Work. A complete overview of the FIPA
33 specifications and their current status may be found in the FIPA List of Specifications. A list of terms and abbreviations
34 used in the FIPA specifications may be found in the FIPA Glossary.

35 FIPA is a non-profit association registered in Geneva, Switzerland. As of January 2000, the 56 members of FIPA
36 represented 17 countries worldwide. Further information about FIPA as an organization, membership information, FIPA
37 specifications and upcoming meetings may be found at <http://www.fipa.org/>.

42 **1 Scope**

43 This document specifies the Cancel communicative act that is compliant to [FIPA00037] requirements.

44

45

46

46

2 Cancel

Summary	The action of cancelling some previously <i>requested</i> action (see [FIPA00057]) that has temporal extent, that is, it is not instantaneous.
Content	An action expression denoting the action to be cancelled.
Description	<p>Cancel allows an agent to stop another agent from continuing to perform (or expecting to perform) an action that was previously requested. Note that the action that is the object of the act of cancellation should be believed by the sender to be ongoing or to be planned but not yet executed.</p> <p>In most interaction protocols, attempting to <i>cancel</i> an action that has already been performed should result in a <i>refuse</i> message (see [FIPA00055]) being sent back to the originator of the request.</p>
Formal Model	<pre><i, cancel(j, a)> <i, disconfirm(j, I_i Done(a))> FP: I_i Done(a) B_i (B_j I_i Done(a) U_j I_i Done(a)) RE: B_j I_i Done(a)</pre> <p><i>Cancel</i> is the action of canceling any form of <i>requested</i> action. In other words, an agent <i>i</i> has requested an agent <i>j</i> to perform some action, possibly if some condition holds. This has the effect of <i>i</i> informing <i>j</i> that <i>i</i> has an intention. When <i>i</i> comes to drop its intention, it has to inform <i>j</i> that it no longer has this intention, that is, a <i>disconfirm</i> action (see [FIPA00044]).</p>
Example	<p>Agent j0 asks i to cancel a previous <i>request-when</i> act (see [FIPA00058]) by quoting the action:</p> <pre>(cancel :sender j0 :receiver i :content (request-when :sender j ...))</pre>
